Education

University of Waterloo **2nd Year | Expected 2029**
Bachelor of Computer Science (Honours) *Waterloo, ON*

Experience

Penny.co **Jun 2025 – Sep 2026**
Full Stack Developer *Remote (Riyadh, Saudi Arabia)*

- Built an **in-house contract system** (drafting, e-signatures, tracking) to replace DocuSign, as part of a **$150K+ contract**.
- Built an **AI assistant** that drafts requests for quotation and proposal (RFQs/RFPs) and routes them for approval, cutting manual request work by **50%**.
- Built **approval delegation** for a government commission's site, supporting approval workflows for **1,000+ users**.
- Added **Arabic localization (i18n)** with right-to-left layouts, allowing the platform to serve the Saudi market.
- Persisted users' filters across sign-ins and made them shareable by link using local storage and URL state.

First Robotics **Nov 2023 – Jun 2025**
Programming Team Head *Hamilton, ON*

- Led the programming team to **first place at the Niagara College championship**.
- Wrote **Java** code on a Raspberry Pi that let the robot drive autonomously and respond to driver controls.
- Mentored junior developers and set up **Git workflows** to keep code quality consistent across the team.

Freelance Developer **Jan 2023 – Jun 2025**
Full Stack Developer *Canada & Saudi Arabia*

- Delivered **full-stack websites** for procurement and SaaS clients using HTML, CSS, JavaScript, NestJS and Angular, alongside school.
- Launched sites for small businesses (a furniture retailer, a real estate agent) using **WordPress** and **Wix**.

Career Education Council (CEC) **Jun 2024 – Aug 2024**
Student iOS Developer, {developthefuture} Virtual Co-op *Remote*

- Built an **AI iOS app** in **Swift** that turns a single meal photo into a full calorie estimate.
- Added **image recognition** to identify the food items on the plate.
- Designed a **per-item calorie breakdown** screen so users see the calories of each food.

Projects

Co-op Tracker | *React, Ruby on Rails, JavaScript, MV3 Extension* | Live | GitHub | Demo **2026**

- Built a dashboard used by **100+ Waterloo students** to track co-op applications from WaterlooWorks and outside jobs.
- Built a browser extension that syncs **220+ applications in one click** from WaterlooWorks.
- Matched applications by **Job ID** so notes carry over across syncs.
- Hosted on **GitHub Pages** with browser-only storage to keep student data private, plus an optional **Rails 8 REST API**.
- Added search, status tabs, deadline alerts and notes to make applications easy to manage.

LEARN Deadline Tracker | *JavaScript, Chrome Extension (MV3)* | GitHub **2026**

- Built a **Chrome extension** that puts assignment, quiz and exam deadlines in one place.
- Built a **background crawler** that collects deadlines from LEARN, course outlines, Odyssey and CS pages, tracking visited pages to avoid loops and running in a minimized window.
- Added **alarm-based reminders** that notify students before each due date.

Technical Skills

Languages: JavaScript, TypeScript, Ruby, Java, Swift, SQL, C, HTML/CSS
Frontend: Angular, NgRx, React, Vite, AG Grid, PrimeNG, Bootstrap, Material Design
Backend: Node.js, NestJS, Express, Ruby on Rails, REST APIs, MongoDB, SQLite, Firebase
AI: LLM integration, image recognition, workflow & approval automation
Tools & Platforms: Git/GitHub, Nx, WordPress, Wix, Chrome Extensions (MV3), GitHub Pages, Raspberry Pi, Linux
